

A. Square?

time limit per test: 1 second

memory limit per test: 256 megabytes

You are given 4 sticks of lengths a , b , c , and d . You can not break or bend them.

Determine whether it is possible to form a square* using the given sticks.

*A square is defined as a polygon consisting of 4 vertices, of which all sides have equal length and all inner angles are equal. No two edges of the polygon may intersect each other.

Input

The first line contains a single integer t ($1 \leq t \leq 10^4$) — the number of test cases.

The only line of each test case contains four integers a , b , c , and d ($1 \leq a, b, c, d \leq 10$) — the lengths of the sticks.

Output

For each test case, print "YES" if it is possible to form a square using the given sticks, and "NO" otherwise.

You may print each letter in any case (uppercase or lowercase). For example, the strings "yEs", "yes", "Yes", and "YES" will all be recognized as a positive answer.

Example

input	Copy
<pre>7 1 2 3 4 1 1 1 1 2 2 2 2 1 2 1 2 1 1 5 5 5 5 5 5 4 10 5 9</pre>	

output	Copy
<pre>NO YES YES NO NO YES NO</pre>	

Note

In the first test case, we can prove that we can't make a square.

In the second, third, and sixth test cases, we can make a square like this:
